MENU PUBLISHING AND CONTROL FOR MULTI-LOCATION RESTAURANT GROUPS

Garnsh

One menu. Every location. Published on purpose.

A controlled publishing layer for restaurant groups on Toast: prepare the menu once, preview every surface, publish per location, and roll back if something is wrong.

Investor Deck v3.1 · November 2026 · Pre-revenue

THE PROBLEM

One menu. Four surfaces. None guaranteed to agree.

A 10-location group maintains one menu in Toast and presents it on the website, a hosted page, QR codes and in-store boards — usually by hand.

- **Price drift** Toast says $16.25; the website says $14.50.
- **Dead items** Discontinued items and last season's menu linger for weeks.
- **Wrong location** One location's prices or items appear at another.
- **No safety net** A bad publish leaves a blank board during service.

This is a described problem from founder research. No customer has been signed and no live location exists.

TARGET CUSTOMER

10–50 location Toast groups with a brand to protect.

- **ICP** Regional fast-casual and casual-dining groups, all on Toast, with a named owner for menu presentation.
- **Buyer** VP of Marketing, Director of Operations, or the founder-operator.
- **Trigger** A price change, rebrand, new location, menu cycle or agency handover.
- **Why now** Menu data is a discovery asset, signage is cheap, and labor turnover keeps recreating the manual updater.

Below 10 locations the budget is small. Above 50 the security review exceeds a two-person team.

SOLUTION

Publish once. Preview everything. Roll back if wrong.

One menu document

Ingest from Toast or CSV/Sheets. Normalize items, modifiers, prices and location variants.

Per-location control

Map every surface to the right location, with overrides and a group dashboard.

Publishing safety

Preview, deliberate publish, version history, rollback and last-known-good serving.

Gen 1 is menu publishing: not ordering, payments, live inventory or real-time sync.

PRODUCT

Four surfaces. One source of truth.

Ingest → normalize → map → preview → publish → serve.

- **Website embed** The group's own site, styled to the brand.
- **Hosted page** A Garnsh-hosted menu per location.
- **QR menu** A phone view opened by a printed code.
- **Menu boards** In-store screens fed from the same published version.

Demo today: per-location rendering, preview/publish, version history, rollback. Production build: 10–12 weeks. No customer screenshots are presented as live.

DIFFERENTIATION

The wedge is publishing discipline, not menu rendering.

- **Version history** Every publish is recorded; one click rolls back.
- **Last-known-good** A broken upstream source serves the last good menu, not a blank board.
- **Per-location mapping** Prices, items and overrides follow the location, not the template.
- **Keep the stack** No change to POS, website or ordering vendor.

Marqii owns distribution, Popmenu and BentoBox own the website, Owner.com and ChowNow own ordering. None sells publishing control as the product.

MARKET

$14–28M Gen 1 market. 3–6% share is a real business.

- **Bottom-up** 189,000 locations × 10–20% in 10+ groups × $61/month.
- **Excluded** Ordering, apps and payments are upside, not the base case.
- **Honest limit** The 10–20% band is a management estimate; Toast does not publish the breakdown.

189K
Toast locations, Q3 2026

19–38K
in 10+ location groups (modeled)

$14–28M
Gen 1 market at $61/location

1,182
locations in the 2029 plan

$59 per location. $40 for boards. Setup at cost.

Item	Price	Basis
Core publishing	$59 / location / month	Per location
Menu boards	+$40 / location / month	Locations with screens
Onboarding	$120 / location, $1,500 min	2h at $60/h — cost recovery
Gen 2 ordering	+$99 / location / month	Conditional on certification
Gen 3 app	$5,000 build + $149 / location / month	Conditional; 25+ locations

- **14-location group** $826/month core; $1,386 with boards at every location; $1,680 onboarding.
- **v3.1 change** The flat $1,500 fee lost $180 at 14 locations and $3,300 at 40. The fee now scales with the work.

VALIDATION

Pre-revenue. Zero signed. The next 90 days are the test.

- **Plan** 60 qualified conversations → 24 paid pilots → 15 groups: 4 free for 90 days, 6 at 20% for six months, 5 at list.
- **Integrity** No logos, testimonials or pilot results are claimed. Reference rights are contractual, not assumed.
- **Purpose** The first ten groups replace founder assumptions with cohort data.

signed design partners	live locations	paying customers	target groups in 2027

GO-TO-MARKET

Founder-led. Agency-assisted. No paid acquisition.

- **Funnel** 60 conversations → 24 pilots → 15 gross groups at a 25% close rate.
- **Pilot** 30 days, 3 locations, $59/location; setup charged on conversion.
- **Design partners** Four groups free for 90 days; six at 20% off for six months. Program cost $30.6K, not $91.3K.
- **Agencies** 25% recurring revenue share. They already handle menu updates and dislike it.

A paid channel at $10–15K per group cannot be funded from $20,000 — the constraint is cash, not LTV.

UNIT ECONOMICS

One 14-location group: 1.3-month payback.

- **Definitions** Upfront investment = CAC + unrecovered onboarding ($0 at cost-recovery pricing).
- **LTV** 38.4x CAC at 2.0% monthly churn; 21.9x at 3.5%. Modeled, with no cohort to test it.
- **Caution** A 38x ratio is an assumption set, not a benchmark. The binding constraint is founder time and cash.

$1,372
monthly revenue

$1,221
recurring gross profit

$1,590
CAC, fully loaded

1.3 mo
payback on upfront investment

Cash-positive in 2027 only because founders work unpaid.

	2027	2028	2029
Revenue	$46K	$361K	$919K
Economic result	−$17K	+$82K	+$233K
Cash from operations	+$26K	+$143K	+$326K
Year-end cash	$46K	$188K	$514K
Net groups	14	46	90
Exit ARR	$130K	$577K	$1.18M

- **Cash floor** $6,750 at the April trough, $1,750 above the $5,000 reserve — with $25,200 of founder onboarding imputed at $60/hour.
- **Gen 1 only** No ordering or app revenue. Paid 2027 onboarding breaches the reserve by about $6.9K; the combined stress needs a $25–30K bridge.

COMPETITION

Everyone solves a different part. Nobody sells publishing control.

Player	What they sell	Price signal	Basis
Toast native	Website, ordering, boards	Bundled / not disclosed	Per location
Marqii	Menu + listings distribution	$90–$250/mo	Per location, annual
Popmenu	Website, menu, marketing	$179–$499/mo	Per location
BentoBox	Website and ordering	$119–$479/mo	Per location
Owner.com / ChowNow	Ordering and websites	$249–$499/mo; from $229	Per restaurant
Agencies	Custom sites, manual updates	Quote-based	Project + retainer

- **The opening** Versioned, per-location publishing on the site the group already owns — without changing POS, website or ordering vendor.
- **The incumbent** The agency, not another SaaS product. Prices captured 11 Nov 2026 from vendor pricing pages.

Gen 1 is the company. Gen 2 is an option.

Gen 1 · 2027

Menu publishing. The only product in the base case. 14 net groups, 192 locations, $46K revenue.

Gen 2 · 2028

Ordering on the group's own site. Gated on Toast certification. Costs $65K before it earns a dollar.

Gen 3 · 2029

Branded app and commerce. Optional, funded from revenue, only after proof.

Critical path: the day-120 Toast gate. Fail means import-first and a re-plan. The combined stress is insolvent by May without a cost response.

Two founders. $20,000. A deliberately narrow wedge.

THE TEAM

- Two partners, $10,000 each, equal vesting.
- Build lead and sales lead; each owns two of four functions.
- Founder names, backgrounds and time commitment: to be completed before external circulation.

THE ASK

- Not raising now.
- Raise after 10 paying groups, ~140 locations, six months of churn data and a clear Toast status.
- If the founders cannot perform 2027 onboarding, the bridge is about $7K — a note, not a round.

The $20,000 works only if the founders perform 2027 onboarding. That is the plan's binding constraint.
