Garnsh — Change Log and Discrepancy Report v3.1

11 November 2026 · Supersedes Business Plan v3.0, Investor Deck v3.0 and the v3.0 register

1. Summary

v3.1 is a substantive rebuild, not a proofread. The largest change is financial: the v3.0 three-year model included Gen 2 ordering and Gen 3 app revenue, so its 2028 and 2029 figures were not Gen 1 numbers. v3.1 separates a Gen 1-only base case from a conditional expansion case and rebuilds the plan, deck, register and model around that separation.

Metric	v3.0	v3.1	Why
2027 revenue	$42,195	$45,946	Revised design-partner program and cost-recovery setup fees
2028 revenue	$440,883	$361,320	Ordering revenue removed from the base case
2029 revenue	$1,287,970	$918,657	Ordering and app revenue removed from the base case
2027 economic result	−$20,558	−$17,197	Setup revenue and the 90-day program
2027 cash trough	$5,923 (April)	$6,750 (April)	Same driver; reserve headroom rises from $923 to $1,750
2027 year-end cash	$23,892	$45,643	Setup fees from six discounted groups; shorter free period
2029 exit ARR	$1.63M	$1.18M	Gen 1 only
2029 operating expense	$614,988	$471,000	Cost base sized to Gen 1, and support moved out of opex
Plan length	18 pages	15 pages	~13 pages main body plus appendices
Deck	15 slides	15 slides	Rebuilt content and figures, not reformatted

2. Strategic changes

2.1 Gen 1-only base case. Removed ordering ($99/location) and app ($149/location plus $5,000 build) revenue from Scenario A. They were 17%/28% and 3.5% attach in v3.0 and made the 2028–29 numbers look like a different company. Scenario B now shows them separately, with explicit development cost ($75,000 in 2028; $70,000 in 2029), certification dependency and launch dates (July 2028 and July 2029).

2.2 Design-partner program cut from 12 months to 90 days. The v3.0 offer — four groups free for a year, six at 20% for a year, setup waived for all ten — cost about $91,286 in foregone revenue and labor against a $20,000 balance sheet. The v3.1 program costs about $30,595: four groups free for 90 days, six at 20% for six months, setup waived only for the four free groups. The trade-off (90 days may be short for a publishable case study) is stated in the plan.

2.3 Setup fee changed from a flat $1,500 to $120 per location, $1,500 minimum. The flat fee lost $180 at 14 locations and $3,300 at 40. The three requested alternatives are modelled in the plan; cost-recovery is recommended and adopted.

2.4 One customer funnel. v3.0 used 10 design partners, 6 discounted, 4 free, 15 gross groups, 40 conversations and 60 conversations in different sections. v3.1 uses one chain: 60 qualified conversations → 24 paid pilots → 15 gross groups (4 free, 6 discounted, 5 full price) → 14.0 net groups → 192 live and paying locations. The arithmetic error ("40 conversations produce 15 customers") is removed; 15 groups at a 25% rate requires 60 conversations.

2.5 Market evidence re-labelled. The 189,000 Toast locations, +21% and $2.5B ARR are verified against Toast's Q3 2026 results. The 10–20% multi-unit share remains a management estimate, now explicitly labelled MODELED, with the research that would improve it named.

2.6 Competition rebuilt. Marqii is reclassified from "partner or acquirer" to an adjacent competitor with published per-location pricing. Pricing is shown with its basis (per location, per brand, per restaurant, quote-based) and a verification date. Claims about Toast's native tools are narrowed to what Toast documents: a view-only website menu

channel and limited customization, not "a bad menu experience". BentoBox's Clover-only status and its pricing remain secondary-source claims and are labelled as such.

2.7 Toast section rewritten. v3.0 mixed up standard access, partner access and the legal right to use customer credentials. v3.1 separates the three routes, cites the four Toast developer documents with access dates, and states that public-facing use of customer-supplied credentials is unverified. The day-120 gate now forces a route decision rather than "approval in hand or in process".

2.8 Founder section completed with placeholders, not invention. Names, backgrounds, restaurant experience, time commitment and equity split are marked `[FOUNDER INPUT REQUIRED]`. Role responsibilities and decision rights are drafted so the founders only need to confirm or change them.

2.9 Plan shortened. 18 pages to 15, with detailed schedules moved to appendices. Repetition of the product boundary, the Toast caveat and the reserve policy was cut to one statement each plus one cross-reference.

---

3. Calculation corrections

#	Item	v3.0	v3.1	Cause
1	Setup margin at 14 locations	−$180 per group, disclosed but not modelled	Modelled as $0 via cost-recovery fee	Flat fee did not scale with location count
2	Setup margin at 40 locations	Not calculated; would be −$3,300	$0	Same
3	CAC vs LTV	Page 6 said CAC exceeds LTV; page 13 said 38.4x	Definitions fixed; contradictory sentence removed; paid-acquisition explanation substituted	Two different claims in one document
4	Payback	1.45 months	1.30 months	Net onboarding cost is now $0, so upfront investment = CAC
5	Downside LTV:CAC	13.0x	21.9x	v3.0 added net onboarding to the denominator while calling it CAC
6	2027 paying locations	142 (with 193 live)	192 (with 192 live)	90-day free period ends within 2027; v3.0's 12-month free period did not
7	2027 gross groups	15, from 40 conversations at 1-in-4	15, from 60 conversations at 1-in-4	Arithmetic in v3.0 was wrong
8	2027 onboarding labor	$25,200	$25,200	Unchanged and still imputed, not cash
9	2027 paid-onboarding trough	−$6,386 (October)	−$1,878 (June)	Higher setup revenue and the 90-day free period improve cash; the reserve is still breached
10	Support cost	In COGS at $2,500/month, and again in 2029 opex at $7,500/month	In COGS only: $2,500/month from 150 locations, $7,500/month from 800	Double count
11	2028 COGS	$111,882	$111,171	Rebuilt cohorts and onboarding timing
12	Accounts receivable	$750 (2027), $2,250 (2028)	$840 (2027), $2,520 (2028)	Rebuilt setup-fee collection
13	Combined stress	Not modelled	Trough −$16,194, insolvent May 2027; response restores $7,085	New case, as requested
14	Expansion case	Merged into base	Separated: −$65,212 in 2028, + $136,376 in 2029, cumulative + $71,164	Revenue was being counted before the product existed

---

4. Claims removed or qualified

Removed

- "CAC exceeds LTV" at the proposed price points.
- "Forty conversations produce ten design partners" and the implied 15 groups from 40 conversations.
- The description of Marqii as a potential partner or acquirer rather than a competitor.
- The implication that Toast Websites cannot produce a suitable menu experience.
- Any suggestion that Toast approval, certification or marketplace access exists.
- The claim that six showcase groups and four design partners are separate programs.
- The 2028–29 revenue, profit and ARR figures that included ordering and app revenue.

Qualified

- "LTV:CAC 38.4x" is now labelled MODELED and described as an assumption set, not a benchmark.
- "Gen 1 SAM $13.8M–$27.7M" is labelled MODELED, with the 10–20% input identified as a management estimate.
- All competitor prices carry a basis and a date; secondary sources are marked.
- "Last-known-good serving" is described as designed, not built.
- The design-partner case study is a contractual obligation and a target, not a promised outcome.
- The 2027 funnel is labelled TARGET throughout.

5. Deck changes

Rebuilt from the plan rather than reworded:

- 15 slides, one message each.
- Financial slide replaced with Gen 1-only figures and an explicit note that paid 2027 onboarding exhausts the capital.
- Validation slide shows zeros (signed, live, paying) next to the 2027 target, so the deck cannot be mistaken for traction.
- Competition slide now shows price basis and avoids per-location vs per-restaurant comparisons presented as equivalent.
- Unit-economics slide labels the 38.4x ratio as modeled and carries the 1.3-month payback.
- Team slide uses placeholders; no founder biographies were invented.
- No product screenshots are used, because none exist. The deck describes the workflow and states which capabilities are demo-only.

6. Discrepancy report — unresolved items

These could not be resolved from the available materials. Each is marked in the plan and register.

#	Issue	Status	What is needed	Owner
1	Founder names, backgrounds, restaurant experience, time commitment, equity split	Missing	Founder input	Both founders
2	Whether customer-supplied Toast credentials may power a public-facing commercial menu	Unverified	Written position from Toast or counsel	Founder A
3	Toast partner fees, revenue share, certification timetable	Unknown	Partner application response	Founder A
4	Customer's incremental Toast plan cost	Unknown	Ten interviews	Founder B
5	Demand at $59; real conversion; churn; CAC	Unknown	First cohort and six months of data	Both
6	BentoBox pricing and Clover-only status	Secondary sources only (orderitto.com, getsauce.com, servestack.ai)	BentoBox pricing page or sales confirmation	Founder B

#	Issue	Status	What is needed	Owner
7	Popmenu additional-location pricing ($300/month)	Secondary source only (restolabs.com)	Popmenu confirmation	Founder B
8	Toast native website pricing	Not publicly disclosed	Toast quote	Founder B
9	Whether 90 days is long enough to produce a publishable case study	Unknown	First two design partners	Both
10	Whether any agency will accept a 25% revenue share	Untested	First agency conversation	Founder B
11	Actual production build duration (10–12 weeks)	Founder estimate	Engineering plan or contractor quote	Founder A
12	Market share of Toast locations in 10+ groups	Management estimate	Paid dataset or Toast disclosure	Both
13	Product screenshots	None exist	Build the production UI	Founder A
14	Legal entity, IP assignment, trademark status	Not evidenced	Filings and signed agreements	Both

7. What did not change

- The positioning: menu publishing and control for multi-location restaurant groups.
- The Gen 1 product boundary: no ordering, payments, inventory, loyalty or real-time sync.
- The customer profile: 10–50 location Toast groups.
- The $59 core price and $40 board price.
- The $20,000 capitalization and the $5,000 reserve floor.
- The conclusion that the first test is whether groups will pay for Gen 1 at all.

8. Files in this release

File	Contents
`garnsh-business-plan-v3.1.pdf` / `.docx` / `.md`	Business plan, 15 pages
`garnsh-investor-deck-v3.1.pdf` / `.pptx`	Investor deck, 15 slides
`garnsh-financial-model-v3.1.xlsx`	Editable model: assumptions, annual, monthly, expansion, downside, stress, sensitivity, funnel, unit economics, sources
`model_v31.py`	Auditable model source (the workbook is generated from it)
`garnsh-evidence-register-v3.1.pdf`	Claims with classification, source and date
`garnsh-change-log-v3.1.pdf`	This document

All financial figures in the plan and deck trace to `model_v31.py`. Where a figure is quoted in more than one place, it is generated from the same run: revenue, gross margin, operating expense, economic result, cash, groups, locations, ARR, trough, program cost and expansion contribution.

Prepared 11 November 2026. Nothing in this release should be read as evidence of customers, revenue, Toast approval or product readiness.
