MENU PUBLISHING LAYER FOR TOAST

Garnsh

Your menu, everywhere.

We publish the menu a restaurant already runs in Toast to every guest-facing surface it has — website, QR, screens — per location, with preview, rollback, and a menu that never goes dark.

THE PROBLEM

One menu. Five versions. None of them agree.

The menu a guest sees is never the menu the kitchen runs. It is a copy of a copy, edited by whoever had the login.

- **Fragmentation** The POS holds the real menu. The website holds a PDF from March. The QR code points at a third copy. The boards run off a USB stick.
- **Multi-location** Groups multiply it — airport, stadium and flagship pricing on the same item, each with its own stale copy.
- **Cost** The guest reads $16 and gets charged $18. That is a comp, a bad review, and in some jurisdictions a consumer-protection exposure.
- **Turnover** Someone retypes the menu into Canva every time a price changes. Then that person quits.

3
guest surfaces per location, minimum

0
rollbacks available when a bad menu ships

1
person who knows how to update it

WHY NOW

The menu became the product listing.

- **Machine-readable** AI answer engines and search summaries reward current, structured menus. A PDF is invisible to them.
- **Hardware collapsed** A 43" commercial display is a few hundred dollars. The bottleneck is software and content, not screens.
- **Labor churn** "The person who knew how" is now a recurring annual failure mode in every restaurant.
- **Compounding base** Toast adds ~8,500 net locations a quarter. Our addressable market grows without us spending a dollar.

WHAT IT IS

Four surfaces. One source of truth.

Hosted page

A public menu page per location, server-rendered, phone-first, in the restaurant's own brand.

Website embed

Drops the same menu into the site they already have. No rebuild, no migration.

QR menu

A phone view behind a printed code, one per location — tables, patios, counters.

Menu board

A designed display for screens they already own. 16:9 and 3-panel landscape.

The operator keeps running the menu in Toast. We handle what guests see, where, and for which location.

THE DIFFERENCE

We ship menus like software.

Nobody in restaurant tech treats a menu like a release. That is the entire product.

- **Preview → publish → rollback** Draft v15 is never visible while v14 is live. Every published version is retained and restorable.
- **Last-known-good** If the upstream feed breaks, surfaces keep serving the most recent version that published correctly. No blank boards at the counter.
- **Location mapping** Each surface is bound to one location. The airport price never appears on the flagship board.
- **Freshness, honestly** "Source last read 6 minutes ago" — an operational readout, not a fake real-time claim.

SCOPE

What we refuse to build — and why.

No ordering. No payments. No cart. No delivery. No 86 status.

- **Off Toast's revenue path** We never touch orders or money, so we are never competing with the platform we depend on.
- **Out of PCI scope** No card data, no chargebacks, no tax and tip logic. A different company, with different risk, is what we are deliberately not.
- **No conflict for the operator** We do not threaten their ordering vendor, so saying yes costs them nothing politically.
- **Focus** Every engineering hour goes to the hard part: correct, versioned, per-location rendering.

MARKET

Bottom-up, not top-down.

- **Expansion axis** More POS platforms, not bigger accounts. Square, then Clover, takes the addressable market to $250–400M.
- **Why 10+ first** Longer contracts, real budgets, rational buyers, and location mapping is an acute pain at that scale — not a nice-to-have.

189K
Toast locations, +21% YoY

CUSTOMER

Operators with 10+ locations.

Not single-unit independents. That market is owned by bundles we cannot beat on price or features.

- **Who** Franchisee groups, local chains, hospitality groups, airport and stadium concessionaires.
- **Who signs** Director of Operations or Marketing. Not IT — which means a 20-minute demo, not a procurement cycle.
- **Why they say yes** Pricing integrity per location, brand consistency, and a new opening that does not require rebuilding a website.
- **Why they stay** Switching means re-mapping every location. It becomes part of the opening procedure.

1.2%

monthly churn, multi-unit

4.0%

monthly churn, single-unit

Priced per location, because that is how they think.

Plan	Price	Includes
Solo	$39 / location / mo	Hosted page, embed, QR, one board screen
Growth	$69 / location / mo	Unlimited boards, custom domain, brand kit
Multi	$45 / location / mo	Min. 3 locations. Location mapping, per-location overrides
Group	$35 / location / mo	26+ locations, annual, onboarding, priority support
Setup	$199 one-time	Brand import, first location live, QR assets

- **Rule one** Never discount the per-location price. Per-location price is the entire revenue model.
- **Rule two** Charge per location, not per surface. Surface pricing invites the operator to turn things off.

UNIT ECONOMICS

88% gross margin. 4–6x LTV to CAC.

- **Payback** 13–20 months on multi-unit, 6–8 on single-unit. Single-unit pays back faster; multi-unit is 4x the lifetime value.
- **The margin risk** Onboarding, not infrastructure. Two to four hours of human time per location is why setup fees are not discounted casually.

$52	88%	$3,800	4.2–6.3x
blended ARPU / location / mo	gross margin	LTV, multi-unit	LTV : CAC

COMPETITION

Everyone solves a different part of this.

Player	What they do	Price	Why we differ
Toast (native)	POS, marketing suite, Delphi boards	Bundled / hardware	Brand-first, versioned, any screen they own
Owner.com	Website + ordering + marketing	$249/mo + 5% of orders	We layer on top; no site migration
Popmenu	Website + menu + marketing	~$500/mo + ~$1,300 setup	Cheap, narrow, removable
Marqii	Menu sync to Google, Yelp, Apple	Mid-market	Rendering, not distribution
Signage vendors	Screens + CMS	Signage pricing	Menu-first; also page and embed

Where we win. Where we lose.

- **Win** Multi-location pricing integrity, release discipline, last-known-good reliability — and no requirement to change POS, website or ordering vendor.
- **Win** Design quality in a category where the incumbents look like 2014.
- **Lose** Anyone who wants one vendor for everything. Anyone who wants ordering. Anyone who has decided to live with the problem.
- **No technical moat** This is a well-made CRUD app with taste. The durable advantages are switching cost, distribution and brand — all of which compound, none of which exist on day one.

ROADMAP

Gen 1.0 is the company. Gen 2.0 is the risk.

Gen 1.0 · 2027

Custom menus, order-ready menu boards, location picker. This is the entire company for eighteen months.

Gen 2.0 · 2028

Branded ordering experience that submits into the operator's existing Toast Online Ordering. Not our own checkout.

Gen 3.0 · 2029

Branded mobile app and commerce. Funded from revenue, only after the base case is proven.

Owning checkout means PCI scope, chargebacks, and direct competition with the platform that controls our API access. We take the front-end, not the rails — until there is a signed partnership that makes the rest safe.

Ten locations, six of them paying.

- **January** Entity formed, operating agreement signed, $10K per partner in. Toast partner application filed in week one — it is the longest pole in the company.
- **Jan–March** Product vision, pricing and pitch finalized. Pricing published publicly — it filters customers and shortens every cycle.
- **March–June** Ten locations onboarded. At least six paying, even $50/month. A free showcase is a favour, not validation.
- **July–September** Cash-positive gate. If we are not revenue-positive by September, we stop and reassess instead of spending the buffer.

$20K

initial paid-in capital

Day 120

Toast approval go / no-go

Two founders. $20,000. A deliberately narrow wedge.

THE TEAM

- Two partners, $10,000 each, equal vesting — four years with a one-year cliff.
- Founder-led product and engineering; contract design, because design is the differentiator.
- Advisors wanted: multi-unit restaurant operations, and POS channel sales.

THE ASK

- Three design partners at 10+ locations, on a 30-day pilot, two locations each.
- One advisor with restaurant-group operations experience.
- Not raising yet — deliberately. We raise after 50 paid locations, measured churn, known Toast status, and one 20+ location group signed.

Bootstrap budget: legal and trademark $1.5K · insurance $2K · design $6K · infrastructure $3.6K · buffer $6.9K.

Change it in Toast.
Show it with Garnsh.
